Habytet POS

Complete Operations Manual & FAQ

🚀 Getting Started: Account Setup & Hardware

How do I get my login details?

After you select and pay for a subscription plan, our team will provide you with an email and an initial password. You can easily change this password after your first login.

How do I set up my branches and staff?

Once logged in, navigate to Settings. Here, you can add your specific outlets (up to the limit determined by your plan) and create individual user profiles for your staff members.

Why am I unable to add another outlet?

If the system prevents you from adding a new store, you have likely reached the maximum store count permitted by your current subscription tier.

What devices can I use to run the POS?

The software is highly versatile. You can access your dashboard from any smartphone, iOS/Mac device, or Windows computer.

How do I connect to my salon's printer?

Wireless printing is supported seamlessly, provided your operating device (phone, tablet, or computer) and your printer are connected to the exact same Wi-Fi network.

Can staff log in using a different language?

Yes. There is a language translation option available directly on the staff login screen so they can use the POS in the language they are most comfortable with.

🛎️ Daily Operations: Queue, Check-in, & Chairs

How do I check in a new walk-in customer?

Tap the customer name field and enter their 10-digit phone number. The system strictly uses phone numbers to create unique profiles, ensuring marketing campaigns reach the right person.

How do I check in a regular customer?

When you tap the customer name field and start typing, a dropdown will appear for regular customers. Tapping their name will auto-fill their details.

Why is the 10-digit phone number so important?

The system uses the phone number as the unique ID for every customer. This ensures that even if two customers have the same name, their visit history and marketing campaigns remain completely separate. Only numbers are accepted in this field.

How does queue management work?

Once a customer is checked in, you can assign them to an available station or chair. If all chairs are full, they remain in the active queue until a station becomes free.

Why are the services not showing when I try to clock in a customer?

If you are logging in for the first time, the dynamic services list might initially display "No match found." Simply close the pop-up and reopen it to allow the list to load.

How do I assign or add a chair?

Tap the "Add Chair" or "New Station" button. Note: Do not tap the button continuously, as it may create duplicate chair numbers that will vanish after a few minutes. Store owners and admins can edit chair numbers as needed.

Can a staff member edit an order after it is clocked in?

No. Once an order is officially clocked in, staff members do not have the permission to delete or edit it.

💸 Checkout & Payments

How do I split a payment (e.g., Cash and UPI)?

On the checkout screen, tap the "Split" button. Enter the exact amount received in Cash, and the system will automatically calculate the remaining balance to be collected via UPI.

How do I add a tip for a stylist?

During checkout, enter the tip amount in the dedicated field and assign it to the specific staff member who performed the service.

How does the customer get their receipt/invoice?

Invoices are not sent automatically. After checkout, staff must manually press the send button to share the invoice (and any attached PDF) with the customer via WhatsApp.

How do I log a product bought during a service?

If a customer buys a retail product during their haircut, ensure it is added to their ticket before finalizing the checkout. This will dynamically reduce the product quantity in your inventory.

📦 Inventory & Assets

What is the difference between Products and Assets?

Products are retail items sold to customers. Assets are items consumed during services (e.g., massage oils, facial creams).

Why is the expiry date field compulsory?

Both products and assets require an expiry date. If an asset or product remains in stock past its expiry date, the system will display a red warning indicator to the store admin and owner.

Does an expired asset block me from doing a service?

No. The red warning is an alert, but it will not stop the checkout or service flow.

How do low stock alerts work?

When a retail product falls below the threshold stock level set by the admin, the system will flag it so you know it is time to reorder.

Do I need to leave a note when deleting a service or product?

Yes. If a store admin deletes an item from the catalog, they are required to enter a reason/ note for the deletion for auditing purposes.

⚙️ Store Management & Roles

What can a Store Admin see compared to a Store Owner?

A store admin can only view and manage what the store owner explicitly permits through the user management toggles.

How do I restrict staff access to analytics or expenses?

Store owners can use the permission toggles in the User settings to define exactly what each staff member or store admin can view or edit (e.g., restricting them to view-only for expenses).

Can a Store Admin delete staff?

No. A store admin can add users, but only the store owner has the authority to delete a staff member or a store admin.

What happens if a chair or station is deleted?

Only users with full access (Owners) should manage station deletions. If an admin is granted permission to delete a chair, they must specify a reason for the removal.

How do I change my password or my staff's passwords?

Store owners can change their own passwords and update or reset the passwords for their staff directly from the User Management section in Settings.

How do I log the POS software subscription payment?

In the Expense section, create or select the category labeled "Habytet subscription" to accurately track your software costs.

📞 Support & Assistance

How do I get help if something isn't working or request more outlets?

Use the in-app support feature. Simply push the support button to raise a ticket, and our team will respond as quickly as possible to assist with upgrades or technical issues.
